## Uniroyal looks to new decade

The rubber and plastics industry, which set new records in 1969, starts a new decade in a strong position to capitalize on the growth opportunities presented by a dynamic but demanding economy, George R. Vila, chairman and president of Uniroyal Inc. said in a year-end statement.

These growth opportunities for rubber and plastics, he said, will come in products for home furnishings and home construction, recreation and leisure, transportation and the agribusiness-all of which represent rapidly expanding markets.

For 1970, the initial year in the dynamic seventies, Vila made the following forecasts:

Sales of rubber and plastic products will increase to about \$17.5 billion, up from an estimated \$16.5 billion in 1969. Total tire sales both for new cars and for replacement, should rise to a record 185 million units next year, up from 176 million units in 1969.

Total free world consumption of rubber is expected to reach 6.8 million long tons in 1970, compared with about 6.4 million long tons in 1969. Domestic consumption will be about 2.75 million tons, compared with 2.6 million tons in 1969.

represent some 66.2 per cent, or lion long tons in 1969.
